Ficus pseudopalma

[Synonyms : *Ficus pseudapalma*]

PALM FIG is a shrub or tree. Native to the Philippines it has small, greenish-purple fruit (receptacles) with raised white-flecks.

It is also known as Dracaena fig, Palm-like fig, Philippine fig, and Philippine palm

The tender young leaves are cooked as a vegetable like spinach (*Spinacia oleracea*). Although the fruit are edible they are not considered to be especially palatable.

It is cultivated as an ornamental plant.
