*Paraserianthes*

*Leguminosae*

[*Fabaceae/Mimosaceae*]

*Paraserianthes* is derived from Greek *para-* (beside, near, close to, alongside) and the genus name *Serianthes* components, with reference to the similarity of the genera.

Members of this family absorb nitrogen from the air. Through the bacterial nodules on their deep growing roots they will introduce nitrogen to the soil (and aerate it) to the benefit of neighbouring plants and any following them in the same soil.
