Rubus loganobaccus var. *boysen*

BOYSENBERRY is a variety of trailing shrub.

Boysen commemorates an American horticulturist, Rudolph Boysen (1895-1950) who initially developed the boysenberry in California (United States) in 1923 from the blackberry, loganberry and raspberry. From 1921-1950 he was Superintendent of Anaheim City Parks and when his new hybrid fruit proved to be unviable commercially he stopped improving it. In the 1930s however another horticulturist, Walter Knott living on a nearby property now known as Knott's Berry Farm, resurrected the plant remains, named the revived hybrid after Rudolph Boysen and promoted it successfully. *Loganobaccus* commemorates an American lawyer, businessman and gardener, Judge James Harvey Logan (1841-1928), in whose grounds the loganberry is generally believed to have originated.
