Salsola soda

[Synonyms : *Kali soda*, *Salsola soda* var. *soda*]

SALTWORT is an annual. Native to the Mediterranean it has greenish flowers.

It is also known as *Agretti roscana* (Italian), *Barella* (Spanish), *Barilla* plant, *Barrilha* (Portuguese), *Barrilheira-maior* (Portuguese), *Barrilla* (Spanish), *Langblättriges Salzkraut* (German), *Liscari sativa* (Italian), *Mönchsbart* (German), Opposite-leaf Russian thistle, Opposite leaved saltwort, *Riscolo* (Italian), *Roscano* (Italian), *Soda* (Portuguese), *Soda-maior* (Portuguese), *Solianka sodonosnaia* (Russian), *Soude commune* (French), and *Su da zhu mao cai* (Chinese).

Warning – all parts are poisonous.

Soda may be a reference to the use of plant ash as a source of soda for soap and glass-making.

Before the 16th Century saltwort was exported from countries on the Mediterranean to other countries (including the British Isles) as mineral-rich ash for the glass industry. In Britain its place was eventually taken by the locally available glasswort (*Salicornia europaea*), but France and Italy continued to use saltwort and its close relative prickly saltwort (*Salsola kali*, which had been exported under the name of ‘barilla’) until the 19th Century.

Although its primary use was industrial, the plant once had some local medicinal value.
