*Vicia*

*Leguminosae*

[*Fabaceae/Papilionaceae*]

*Vicia* is derived from Latin *vincio* (to bind, tie round) with reference to its clinging tendrils, and is a Latin name for common vetch (*Vicia sativa*).

Members of this family (*Leguminosae*) absorb nitrogen from the air. Through the bacterial nodules on their deep growing roots they will introduce nitrogen to the soil (and aerate it) to the benefit of neighbouring plants and any following them in the same soil.
